

DATA VISUALIZATION PROJECT

1. Create a highlight table for the distribution of customers by location (state).
2. Create a bar chart to visualize the distribution of purchase amounts by category and season.
3. Create a stacked bar chart that displays the distribution of customers based on the shipping type and the frequency of their purchases.
4. Build a Line chart showing the relationship between age and average purchase amount. Additionally, label the age with the highest and lowest average purchase amount.
5. Create a bubble chart/pie chart showing the total purchase amount for each gender
6. For the dashboard, use action to filter the view.
